1.INTRODUCTION

The Service Learning Hub is a resource for teachers developing service learning activities within their courses to match with community partners' service learning needs. The community partners listed in the database are not the only one that are appropriate for service learning but already have a history of cooperation with the university having a common understanding of what service learning means and providing service learning opportunities for students.

The development of the web-tool started from evaluating different implementation software solutions in order to choose the optimal one in terms of easiness of implementation and deployment and the chosen one has been Wordpress that offers:

- a high portability that will allow the installation of instances within each partner university and other interested entities after the end of the project;
- extensive interconnectivity with most used social media platforms;
- multilingual support.

The web-tool has been designed as a Service Learning Hub allowing teachers developing service learning activities within their courses to match with community partners' service learning needs, students to choose service learning opportunities (curricular and/or extra-curricular) and community actors to publish their service learning offers/opportunities. The design took into consideration further developments related to the integration in a later stage of the students' blog to be used within IO4. The ES Service-Learning Hub has been launched during the LTTA C1 - Teachers training week and has been updated over the whole project lifetime.
